Summary

Graduate student in Engineering Data Science with experience in automating data pipelines, building dashboards, and developing operational workflows. Proficient in Python, with strengths in process automation and model integration.

Experience

AI Automation and Data Analytics Intern, Diversified Medical Practices – Houston, TX May 2026 – Jul 2026

- Automated clinic administrative workflows using Python, replacing manual paper-based processes and transitioning operations toward a fully electronic system.
- Developed automation solutions for everyday tasks such as patient service requests and scheduling, directly applying MS Engineering Data Science coursework to modernize clinic operations.

Data Visualization Developer Intern (React), UnBoxing Community – Bangalore, India April 2024 – July 2024

- Built a React.js portal with REST APIs and Java backend to aggregate data into interactive dashboards for performance tracking and decision-making.
- Collaborated cross-functionally to define KPIs and deliver data visualizations, managing AWS/Git deployments while improving testing and system reliability.

Web Development Intern, EduMoon – Remote, India Jan 2023 – Aug 2023

- Built web pages using HTML, CSS, and JavaScript as part of a collaborative frontend development team.

Projects

OwlPost github.com/OwlPost

- Built an automated Python tool that schedules and sends 70–100 personalized outreach emails daily via Gmail SMTP, with automatic contact list recycling upon completion.
- Implemented a multi-method reply detection system using IMAP scanning with exact email matching to track and manage responses efficiently.

Job Alerts github.com/job-alerts

- Built an automated job-search pipeline in Python that aggregates 10,000+ live postings daily from five sources, applying layered rule-based filters (experience level, visa sponsorship, degree requirements) before ranking fit via the Claude API.
- Engineered an LLM-powered application-drafting system with a persistent memory profile that learns from corrections, paired with a Flask review dashboard and Playwright-based browser automation to pre-fill real application forms.

Education

University of Houston, MS in Engineering Data Science & Ai - Houston, TX Aug 2025 - Present

- Coursework focus: Data analysis, statistical modeling, data visualization, and applied machine learning

Papers Published

DEEP LEARNING FOR SEISMIC SALT SEGMENTATION TO AID HYDROCARBON EXPLORATION USING UNET Jun 2025

Confirmation Letter, Certificate

Technologies

Programming Languages: Python · SQL · C++

Frameworks & Libraries: ReactJS · Redux · MERN Stack · Tailwind CSS

Data Analysis Tools: Pandas · NumPy · Matplotlib · Power BI · Tableau · Data Preprocessing

Automation Tools: Gmail SMTP · IMAP · Python Scripting · Workflow Automation

Additional Tools & Platforms: Git · GitHub · AWS S3 · Jupyter Notebook · Excel

Certifications

Python for Data Science, AI & Development - IBM, Coursera Oct 2023

Certificate
